

D260- Wall fillet

Application instructions

The D240/260 is an angle fillet trim, fitted where the roof abuts a wall or vertical face, against parapet walls, in box gutters etc. It is compatible with C2 and C3 universal corners. An angle fillet generally does not require a batten or to be bonded with trim adhesive. Place the trim against the vertical face and push down diagonally into the corner until the trim fits snugly. Where the trims are over-lapped they should be bonded with trim adhesive and banded together.
